

# Arbor Vitae Broadband Expansion

## Update August 4, 2022

Below is a map submitted by Spectrum of the projected areas that will be serviced by our broadband expansion program. This map is NOT finalized and does not guarantee these residents will receive new service. This map is a first draft submitted by Spectrum.

For the next step of the broadband expansion project, Spectrum will be sending out an engineer to survey our area to get a finalized report on where the broadband is going to be laid and which areas of our town will be serviced. We expect this surveying to take us into fall 2022. According to the Vilas County Economic Development Committee (VCEDC), the planning and applying for state and DNR permits will occur this winter and then the majority of the broadband will start to be laid in summer of 2023.

Currently Spectrum is laying broadband on North Farming Road and Rux Road. The information the town has received from VCEDC is that part of that construction is being funded through federal funds acquired by Spectrum and some of the funds from the town's broadband expansion program. Spectrum already had the required permits and engineering completed on North Farming Road and Rux Road, so they were able to get an early start on this part of the project.

Please check back on the website for updates as work on the broadband expansion continues.
